

AMENDMENTS TO THE CLAIMS

1-20. (Cancelled)

21. (Original) A method for measuring oncogenic activity of a chemical reaction in a minute volume of tens of pl or less comprising:

providing substrate molecules for an oncoprotein containing a label;

disposing said substrate molecule into said minute volume where said chemical reactions occurs producing altered substrate molecules within said minute volume;

terminating said chemical reactions;

detecting the label to identify unaltered substrate molecules and/or the altered substrate molecules to determine activity of the chemical reaction corresponding to the oncoprotein.

22-53. (Cancelled)
